The first impression you form of any home or business starts with the front door. A wooden door, for instance, gives a warm, rich, and personal feeling to a home but a business would need more security. A door made using an engineered stiles & rail system has the best of both worlds. It would provide that personal touch while still supplying stability and security.

At Creative Woodworks Inc, this system allows us to produce parts of the highest quality. We take finger joint Pine that has been dried to 6-8% moisture content or cross-banded LVL from the west coast soft woods and that becomes our core. Then we use 3/16 thick veneers with 3/4" edge bands, in a variety of species and grades to wrap around the core. Our veneer types include Sapele, Sipo, African Mahogany, Spanish Cedar, Poplar, Red Oak, Maple, White Oak, Knotty Alder, and Cherry. This extensive inventory allows us to custom design any stile or rail to your specifications. The result is a finished product that is precisely crafted for strength and fit but is as beautiful as a solid lumber piece.

An engineered stile and rail system has many advantages over solid lumber:

- The process results in lighter, stronger parts with less chance of warping
- Less equipment is needed since the parts are sold ready for profiling
- Less time needed for assembly so your lead time is decreased
- Since you can order the width and length you need, it is easy to calculate a fixed cost
- We only use Franklins type I waterproof glue in our laminating process
- To ensure our standards of quality we perform random testing using the WDMA type one testing (which includes a Multiple Boil – Dry Test.)

If you want your company to be known for manufacturing long lasting and beautiful doors, you need to start with the right parts. Call us at Creative Woodworks Inc. and start building your reputation for quality.

About Us Page

“A good name is to be chosen rather than great riches”

Creative Woodworks Inc has patterned its way of doing business on that verse. Our reputation is the most important thing we have and we guard it jealously with our focus on honesty and customer service. We were one of the first in the southeast to offer the engineered stile and rail system using custom sizes with widths up to 10", lengths to 10' and a thickness of up to 2 5/16". We have seen competitors come and go due to business ethics that we prefer to avoid. We feel it would be unfair business practices to sell clients our door components and then compete against them by manufacturing doors and millwork also. Our goal is to develop trusted relationships with our clients that will allow us to help each other to succeed.

We have a long history in the industry and we work with the top experts associated with building custom doors and windows. We opened our doors as a custom cabinet shop in 1995 but we went through many changes as our company grew. In 1996 we expanded and included custom door and entryway units into our product line. By realizing the need for and advantages of this system, we began making stiles and rails for our own doors in 2000. Over time other shops began requesting parts from us and in the beginning we were overwhelmed by demand. So the decision was made to stop making doors and purchase additional equipment to meet the needs of our customers.
